

DEPILAR SYSTEM™

DEPILAR SYSTEM NEWSLETTER / 002

JULY 21 2009

We love talking to our customers and invite you to an open dialogue.

With the new Depilar System we would like an on-going Q&A between Norlab and our customer spas and salons as well as the clients being treated. To encourage dialogue we will include questions asked and the answers in our newsletters and on our website. E-mail us with your questions to:

info@norlabusa.com.

What is the difference between Epilar and the Depilar System?

Since the launch a month ago we have been asked many questions about how the Depilar System works, and the most frequent question has been "What is the difference between Epilar and the Depilar System?"

Answer: Using research and experience from having launched Epilar worldwide we developed the new and improved Depilar System. Here's just how we're new and better:

- **New airless pump bottles** for more accurate dosage and better handling (approx. 50 pumps per bottle)
- **Twice as much product** than Epilar per kit, each kit contains 2 x 10ml per bottle (Inhibitor and Activator)
- **Improved efficacy** with the synergistic effects of Trypsin and Chymotrypsin, both natural proteolytic enzymes
- **5-10 times higher** enzyme activity than Epilar
- **Great price!** Better packaging, twice as much product for \$100 per kit. Discounts; 10% off orders of 12 kits or more, 25% off orders of 24 kits or more
- **Recycling discount** - for each empty Depilar System kit that you return to us for recycling, get 10% off another kit in your next order

No other hair growth inhibitor is as effective on ALL skin types.

Anyone can be treated with the Depilar System! Men or women of all ages, skin type or color, or hair color or thickness - all can be treated assuming they have no counter-indication to waxing. The Depilar System uses natural enzymes and has been tested for adverse effects on human beings and no adverse effects were found.

The Depilar System must be used in conjunction with waxing, sugaring, threading or tweezing where the hair is removed by the root.

When waxing, the hair must be at least ¼ inch in length to ensure the hair is removed by the root, and the follicles are left empty enabling the Depilar System enzyme-based gels to enter the empty follicles and break down the cells responsible for hair growth.

Note! We only sell to verified professionals.
